

# This Bucket Means Business

Multi-purpose functionality, hygienic design and unmatched durability make the 5 Gallon Pail a smart investment for any operation.

# A problem-solver, however you use it

When you scale up a pail to hold 5 gallons of food and beverage ingredients, the pail becomes more than just a pail. With its hygienic design and premium-quality, durable materials, the Vikan 5 Gallon Pail is a multi-purpose powerhouse you'll find yourself using everywhere.

## The quality and durability you expect

Like all Vikan products, the 5 Gallon Pail is made from premium-quality, highly durable materials that are all approved for use in the food and beverages industry. That means:

- Long-lasting performance
- No need to replace frequently – save money
- Higher quality for greater compliance certainty
- Less wear and tear
- Less risk of foreign bodies (plastic fragments)

## Mix with speed and ease

The 5 Gallon Pail is an ideal “mixing station”, where you can mix ingredients stored in smaller Vikan pails or in multiple 5 Gallon Pails.

The pail is perfect for solid or liquid ingredients, and its optimized size and shape make it large enough to meet all your mixing needs, but small enough for safe lifting and transport. Features like the bottom handle and a rounded rim and lip also facilitate ergonomic, no-spill lifting and pouring. And durable bevelled measurements inside help you measure more accurately.

Developed on the principles of hygienic design, the 5 Gallon Pail is easy to clean and helps you comply with hygiene and food safety regulations however you use it.

# Store like never before

A 5-gallon capacity makes the 5 Gallon Pail a very useful storage solution for liquid or solid ingredients and mixtures. Add in a stackable design and portability, and you get storage that can save space and time.

As space is a challenge in most production facilities, Vikon made the 5 Gallon Pail stackable. Stack two buckets on top of each other, and effectively double the amount of ingredients you can store per square meter of storage space.

Handles and an optimized size make the 5 Gallon Pail a conveniently portable storage solution, while a snap-on lid and hygienic design features facilitate compliance with food safety standards.

# Food safety and hygienic design

In the food and beverages industry, companies that don't meet food safety and quality standards soon find themselves out of business.

That's why Vikan developed the 5 Gallon Pail in line with hygienic design principles – with features such as drainage holes to prevent liquid accumulation and easy-to-clean rounded angles inside. And it's why Vikan products comply with all relevant EU and FDA standards for food contact.

What is hygienic design?

- Easy to clean and dry
- Durable and well made
- Smooth surface finish
- No acute internal angles
- Food-safe materials
- Fully tested and documented

## Move more, more easily

The 5 Gallon Pail is made to move, either by yourself or with a colleague using the ergonomically designed side handles. When carrying lighter loads, use the comfortable over-moulded grip on the steel handle. When moving heavier loads, team up with a colleague and use the sturdy side handles.

The pail's large size lets you move more in fewer trips, saving time, and its ergonomic design makes pouring and cleaning easier, with less risk of spills or strain. The pail is available in 5 colors to facilitate HACCP compliance with regard to segregation of use.

## Clean safely and effectively

In addition to mixing, storing and transporting food and beverage ingredients, the 5 Gallon Pail makes an ideal cleaning and disinfection station for all sorts of food-related tools and utensils.

It's the perfect size for cleaning most items, and its wide top facilitates access and maneuvering while cleaning. The large size also provides plenty of room for disinfecting your tools after cleaning. And it's easy to move around as needed.
